Himanshu Meshram

Pune | +91-8208260703 | himanshumeshram0703@gmail.com | GitHub | LinkedIn

Summary

Data Analyst with hands-on experience in Excel, SQL, Python and Power BI, skilled at cleaning raw data, writing analytical queries and turning findings into clear business insights. Built interactive Power BI dashboards using DAX measures and KPI cards to track sales performance. Completed a Data Analytics internship covering data cleaning, visualization and reporting. Comfortable presenting findings through dashboards, charts and written reports.

Projects

Netflix SQL Analytics | *SQL, Business Analytics* GitHub

- Designed and executed an end-to-end SQL analytics project on the Netflix content dataset, solving 17+ real-world business problems using Joins, CTEs, Window Functions, Subqueries, and CASE statements.
- Performed content, profitability, and trend analysis to uncover catalog insights across genres and release years.
- Wrote optimized, readable queries to answer specific business questions, reflecting an ad-hoc analysis workflow similar to real analyst requests.
- Documented query logic and findings on GitHub to demonstrate a clear, reproducible analytical process.

Brazilian E-Commerce Analysis | *Python, SQL, Power BI* GitHub

- Analyzed 100K+ e-commerce orders to understand sales performance, seller efficiency, customer behavior, and delivery performance for data-driven business decisions.
- Cleaned and transformed multi-table data using Python and SQL Server, and designed a Star Schema for efficient analytical reporting.
- Developed a Power BI dashboard to monitor key KPIs, identify performance trends, and provide interactive insights into sales, sellers, customers, and logistics.

Pizza Sales Dashboard | *Power BI, DAX, Data Modeling* GitHub

- Analyzed 48K+ order line items from a pizza sales dataset to uncover sales trends, product performance, and customer ordering behavior.
- Built an interactive Power BI dashboard with a custom date table and DAX measures for Total Revenue, Total Orders, Total Pizzas Sold, and Average Order Value, with slicers for month and day of week.
- Visualized revenue by category, size, and pizza type, plus monthly trends, day-of-week patterns, and hourly order volume, to support staffing and menu decisions.
- Identified that Large pizzas drive ∼46% of revenue, Classic is the top category, and orders peak at lunch (12–1 PM) and on Fridays.

Skills

Programming: Python, SQL
Libraries: Pandas, NumPy, Seaborn, Matplotlib
Visualization: Power BI
Databases: MySQL
Tools: Jupyter Notebook, Google Colab, VS Code, Git, GitHub

Education

B.Tech, CSE – NCER, Pune 2026
XIIth (HSC) – RVB, Nagpur 2022

Certifications

SQL Advanced – HackerRank 2026
Data Analytics Essentials – Cisco Networking Academy 2026
Python for Data Analysis – Simplilearn 2026
